

PRESENTS

INTRO TO WEBDEV IGNITE PROGRAM

Grades 9-12

www.mathstronauts.ca

Description

Intro to WebDev is an exciting 10-week course in which high school students (Grades 9 - 12) will explore and become fluent in three fundamental programming languages used in web development: HTML, CSS and JavaScript! In this introductory course, we take learners on a journey to construct and implement the layout, design, and necessary interactivity of their own websites, starting with the basics. Learners will not only create their own websites from scratch but also acquire the knowledge and skills necessary to use straightforward third-party application programming interfaces (APIs) in their websites!

Through this course, learners will develop digital technology, problem solving, critical thinking, and organizational soft skills by learning to code in various programming languages, solving website logic problems, critically pondering the various aspects and methods that can be used in their website, and organizing its layout, design, and logic. To succeed in this course, learners are encouraged to take the IGNITE Tech Explore (Level 2.5) course.

How To Register:

Visit www.mathstronauts.ca/Programs to register by **October 4, 2021**.

MONDAYS
6:30 - 8:30PM
